

COMMAND LINE OUTPUT REDIRECTION

Abstract

In one embodiment the invention provides a method to provide command line utility output to an application without the need of temporary files. The method includes receiving an identifier, receiving output from a command line utility, and storing the command line utility output in a system storage at a location identified by the identifier. In one illustrative embodiment, command line utility output is stored in a system registry database. In another illustrative embodiment, command line utility output is stored in a shared system memory.

The method may be stored in any media that is readable and executable by a computer system.
